KARLA B. SISON

Malabon City, Metro Manila, Philippines · 09776880903 · sisonkarlab@gmail.com · github.com/floppy-cheese

Summary

Entry-level web developer (BS Information Technology, 2026). Learned TypeScript/React and Ruby on Rails on the job through OJT and a part-time role, and built Android (Kotlin) and PHP/MySQL projects around disaster preparedness. Most comfortable with web development.

Technical Skills

Languages: TypeScript, JavaScript, Kotlin, Java, Ruby, PHP, HTML, CSS

Frameworks and platforms: React, Ruby on Rails, Android SDK

Databases: MySQL

Tools: Git, GitHub (pull requests), Android Studio, Lucidchart, Canva

Experience

Part-time Software Developer · moodLearning, Inc. · Oct 2025 – Jun 2026

- Built a CMS dashboard page from scratch in TypeScript and React.
- Fixed bugs across the CMS (React front end, Rails backend), including forms that failed to save because email fields were stored as strings instead of arrays, and API calls pointing to the wrong path and returning 404s.
- Implemented image handling across the CMS: scaling, deletion of optional photos, and previews of new uploads before saving.
- Added form validation and audit logging: required-field checks, duplicate-entry prevention, and audit-log entries for tracked changes.
- Fixed slow and incomplete data loads by optimizing database queries and removing a filter that hid records, and added last-modified sorting to table listings.
- Handled LMS site tasks: backed up and restored courses from the old site to the new one, created user roles, implemented a course tiles plugin, and added course deletion and category tile images.

Projects

LifelineTech: Disaster Preparedness Web Platform (group capstone thesis)

- Web-based disaster preparedness platform with a PHP and MySQL backend; companion to GabayApp.
- Primarily handled front-end coding and UI/UX design using HTML, CSS, JavaScript, and PHP; a groupmate built the backend.

GabayApp: Disaster Evacuation Android App (Kotlin, group capstone)

- Android app (Kotlin, MVVM) that routes users to the nearest evacuation center, with a fallback chain across routing services (Valhalla, OSRM, offline straight-line), a "path is blocked" button that reroutes to a new route or another center, and a bundled dataset of 1,600+ evacuation centers across the Philippines.
- Fetches earthquake data from the USGS API. Developed with AI assistance.

Personal Portfolio Website

- Built with vanilla HTML, CSS, and JavaScript; project pages load through fetch-based overlays without full page reloads.

Education

New Era University · Bachelor of Science in Information Technology · Aug 2021 – Jun 2026
